September 8, 2021

1 Program explanation

My program function in a very basic manner. It starts of expecting any input. The user may input a string or a small integer which will result in a message telling that the program needs a big integer. If the input is an integer above 1581 the program will calculate if the integers corresponding year is a leap year. The program responds with yay or nay deponding on if the year is or isn't a leap year.

input

Integer or number under 1582. try again

big integer

Math says yes.yay

Math says no. nay
